

iSecure - Managed Security Services

A robust and holistic managed security service, designed to mitigate risk and protect your critical data

Key Benefits

- Monitors, updates and protects all of your key computing devices such as desktops, laptops, file servers, USB storage devices and Wi-Fi connections.
- No capital outlay required.
- Stops threats such as viruses, spam, spyware, hackers, phishing and data theft before they reach your business.
- Preserve your bandwidth for mission-critical network traffic.
- Protects computing devices in the office or on the road.
- Blocks employee access to inappropriate websites.
- Locks down confidential and financial data.

Choose *iSecure* as part of MJ Flood Technology's *iManage* suite, to protect your computers, laptops, file servers, USB storage devices and Wi-Fi connections from viruses, spyware, malware and the latest internet-borne security threats.

Information security is always high on the agenda with IT professionals yet it's an area that many struggle with. As the internet industry evolves and the sophistication of internet-borne threats increases, businesses need to put in place a holistic approach to protect employees and maintain the integrity of the business data that they hold. And it's no longer about protecting desktops, laptops or servers but mobile devices such as tablets, USB devices and Wi-Fi connections.

iSecure as part of MJ Flood Technology's *iManage* service is a cloud-based managed security service, specifically designed for businesses with limited resources or those wishing to free up scarce internal IT expertise for projects of a more strategic nature.

It provides robust, holistic protection for your business data, around the clock. And our threat network has more than 70 million threat sensors worldwide, identifying and blocking new internet dangers as they emerge.

"IDC expects major market shifts as customers across all size segments increasingly rely on managed (CPE) and cloud security services to meet their security requirements, and as cloud services adoption moves from private to hybrid to public cloud."

Automated Protection

With *iSecure*, you don't have to worry about viruses, threats and dangerous websites. We automatically keep your security environment patched with the latest updates that detect and block emerging threats, as they happen.

And because these threats are blocked in the cloud, you can preserve your precious internet bandwidth for mission-critical network traffic and ensure that anti-virus processing activity won't slow down your machines. *iSecure* stops up to 95% of spam and 100% of viruses and other email-based threats.

Choose *iSecure* as a stand-alone service or as a bolt-on to our *iManage* suite of full managed services.

MJ Flood Technology specialises in total ICT solutions. Its business includes a full communications and technology portfolio incorporating IT infrastructure and security, content management, disaster recovery and a wide range of agile cloud services.

Its team of technical professionals are accredited to the highest industry standards. The company is a Microsoft and HP Gold Certified Partner and is the country's only CA Platinum Partner. MJ Flood Technology is part of the MJ Flood Group of companies, a wholly-owned Irish operation with its headquarters in Dublin and seven regional offices.
